**12. JUSTIFICATION:** Document justification for request. Include anticipated economies or efficiencies to be realized by the City, including reductions in personnel or actual cost (cash flow) reductions to be realized in your budget. In August 2014, the City initiated a study to address flooding and water quality concerns in the 83 acres on the south side of Lake Arnold, generally bounded by Curry Ford Road to the south, Crystal Lake Drive to the west, and Berwyn Road to the east. The study provided recommendations to improve three existing outfalls and provide additional piping to better connect the basin areas to those outfalls. This services authorization will enable the engineer to perform the survey, engineering design of the piping system and outfalls, regulatory permitting, preparation of drawings and specifications for the construction bid, and assistance during the construction phase.

The project will divert stormwater away from the low areas and reduce the potential for flooding within the basin. In addition, the project will also improve the water quality by installing baffle boxes.
